Q1: What is Python?

Ans: Python is a versatile, high-level programming language widely used in various domains such as web development, data science, artificial intelligence, and automation. It was created by Guido van Rossum and released in 1991. Python is known for its simple syntax, which makes it easy to read and write, even for beginners. It supports multiple programming paradigms, including object-oriented and functional programming. Python has a large standard library and a vibrant community that contributes to thousands of third-party packages available via PyPI. Developers use Python for tasks like scripting, machine learning, and building web applications with frameworks like Django and Flask.

Q2: What is a loop in programming?

Ans: "Gello" in Greek mythology refers to a female demon or revenant who is associated with the reproductive cycle and can cause infertility, miscarriages, and infant mortality. By the Byzantine era, "gelloudes" were a class of such beings. The term also appears in other contexts, such as a low-cost teleoperation framework for robot manipulators. Additionally, "Gello" can refer to a WordPress theme, a song, and a cannabis strain, according to Apple Music, ThemeForest, and Harborside respectively.
